## Powerline. io unblocked cool math games

Tiny browser-based mini-games that, however, bring an intense and multiplayer run, the .io games have been a viral phenomenon popularized by Twitch streamers and their presence in an episode of House of Cards. The .io extension means the British Indian Ocean Territory, but like Agar.io, one of the first super popular multiplayer games .io used the extension, has since become a popular choice, giving the genre its name. Lightweight and affordable, but capable of intense and sometimes even relentless gameplay, the best .io games can be played even on an irregular connection and old hardware. With the sheer number of .io games out there, it can be hard to figure out which ones are worth a chance, so we've collected a list of 10 of the best .io games out there. Agar.io (Image credit: agar.io)The great grandfather of all of them, Agar.io is a game of cellular survival ate or ate, drawing inspiration from the behavior of microbes on top of the middle agar of a petri dish, hence the name. Players start small, zigzagging across the map and eating food to gain size. Eventually, you grow big enough to swallow other player cells, resulting in a deadly game of cat and mouse as you try to lure other cells into your range while avoiding larger swarms of players who can swallow you. Simple but tense gameplay has become a viral sensation, as it was even featured in an episode of House of Cards.Slither.io(Image Credit: Slither.io)Slither.io draws inspiration from the classic snake game, as players glide around the map consuming food motes in order to grow in size and points. Maneuvers is the name of the game here, as players are eliminated when the head of their snake collides with the body of another snake, resulting in players suddenly changing direction or winding around in order to trap and eliminate the unwary. (Image credit: Diep.io)Diep.io is another classic game, this time with players controlling tanks, destroying obstacles and enemy tanks to collect points and level their own machines. A reasonably involved upgrade system allows you to equip your tank to your liking, allowing you to build monstrosities from the hell of bullets, agile attackers or powerful snipers. Varied game modes, from free-for-alls to team battles and more give Diep.io good replay value and reasonable depth, while it's still a fairly affordable browser game. Gats.io(Image Credit: Gats.io)Gats.io takes the military sniper from top to bottom, while players select weapons and armor and then carefully hunt each other in a tight maze of barriers and passages. Each weapon brings its own advantages and disadvantages, and players will have to balance the exchanges of mobility and protection of the armor or lack thereof. Fast and reasonably affordable gaming, Gats.io offers Free, team deathmatch and control point, giving you some variety in gameplay. Brutal.io(Image Credit: Brutal.io)Brutal.io lives up to its name as players spray each other with giant balls spinning from death. Starting Starting A small morning star ball attached to your player, you'll run around the map to gather food, slowly growing the size of your deadly ball, which you can then fling at other players, using a combination of spin, planning and more than a little luck. If the throw does not catch them, then the return can, because holding the mouse button invokes the death ball back to the player's tail, flattening everything in its path. Gartic.io (Image credit: Gartic.io)Tired of the intensity of killing or being killed from other .io games? Gartic.io is a much more relaxed case, as players take turn in a charade-style game, with one player drawing a designated word and the others having to guess what that word is. Gartic handles book scoring and maintenance, and language-based game rooms allow you to play in the language of your choice. Warbot.io(Image Credit: Warbot.io)Warbot.io is a bit outlier among other .io games in which it features 3D graphics, providing great eye candy, but also decreasing load times, especially for those without high-speed connections. Warbot is a twin-stick style tip-to-down shooter, with the mouse cursor controlling its aim, while the WASD keys control its movement. Players march across the battlefield, engaging with other wicks while avoiding enemy fire, collecting powerups and crawling to the leaderboard. Zombs.io (Image Credit: Zombs.io)Zombs.io brings the inevitable zombie survival spin to the genre as players slowly build their bases, establishing defenses and bricking choke points, gathering resources during the day and defending the hordes at night. From there, it's a battle of endurance and survival as you upgrade your towers and personal equipment in order to fend off ever harder waves from the undead. Wings.io (Image credit: Wings.io)Wings.io takes multiplayer chaos to the skies as players engage in large 2D melees, their fighter planes flying all over the place, picking up powerups, weapons and engaging in twisted dog fights as you try to line up the perfect shot while keeping your tail away from enemy fighters. Look elsewhere for a deep simulation, as this is a whirlwind furball of planes zigzagging and engaging in rapid-fire carnage. Deeep.io (Image credit: Deeep.io)Deeep.io has you evolving into a variety of fish and animal shapes as you collect food and explore the shallow depths of the sea. Each animal shape comes with its own abilities and is optimized for different biomes, giving players plenty of variety as they spread, hunt other deep sea beasts and explore what the oceans have to offer. You can play Deeep.io aggressively as in other style games .io, or you can escape conflicts and just explore and experience the capabilities of each of the forms, giving you a fair amount of things to play. Screenshot: ProdigyMy's son came home from school a few months ago asking if he could play another new video game that a friend had told him. This happens sometimes by often results in me researching the game and then disappointing it with my answer because whoa, not appropriate for age - so I didn't commit immediately. But it turns out that this particular game, called Prodigy, is a very fun monster exploration game and a math skills game. Prodigy is a fantasy style game that is a kind of cross between Pokémon and the creative mode of Minecraft, with some mathematical equations thrown in To make money to customize your home, buy pets or win prizes, they have to defeat monsters. To defeat monsters, they have to correctly answer mathematical questions to win spells. The questions, which Prodigy says are aligned with state grade 1-8 curricula, including Common Core and TEKS, are tailored to each child's strengths and weaknesses.Prodigy determines your child's skill level using a placement test, giving your child more difficult or easy questions while playing to find out where they are. The placement test starts immediately and runs in the background as the game is played. It starts on a note below the note that you or your child selected when setting up your account, and then works up to determine your child's actual grade level. After the test is over, the difficulty level continues to adapt, revisiting prerequisites or jumping ahead, depending on your child's performance. This is my son's house, which you may notice is basically just a large room with a bed for each of your friends so they can have slumber parties. One more bookcase, because every house needs a bookcase. Screenshot: ProdigyMy's 9-year-old son is currently more interested in helping some creatures named Floatings rebuild their home, which was —I think?— destroyed by the Puppeteer. I don't know, there's a lot going on in this game: battles, rescues, gems, mythical creatures, shopping, decorating and trips to other worlds. It often seems like another language to me, but I can tell by the lively way he talks about the game he's in all of it. As for being able to chat with other users online, which is always one of my main concerns, Prodigy has a messaging option, but is well blocked:While the list of chats and friends can not be disabled, your students are always welcome to play in offline mode where all social elements are disabled and the game is filled by computer players. This is always accessible from the world selection screen after logging in. Only predefined phrases that were deemed safe were added to the game. Users can't type or send what they want. This has been put in place for privacy and security reasons for students/children. No information or inappropriate language can be typed and viewed by any other user. About 93% of American adults have some degree of mathematical anxiety. I admit I'm part of this group... Read moreKids can play the game for free, but certain features and options will be unavailable under the basic subscription. So if they like the game, be warned they will want to very quickly upgrade to a premium membership for the extra bells and whistles (at a cost of \$4.99 per month for a year, \$7.95 per month for a six-month membership or \$8.95 on a regular month-to-month plan). We started with free adskaeand tracked how much he played for about a month. Prodigy provides weekly summaries of how much they play, what mathematical skills they practiced and how proficient they were in different categories. Once I was confident that my son was sticking to it, I upgraded him to a monthly joining. Now that he's had it and used it for a few months (he actually spends more time in the game now that the extras are unlocked), I can upgrade him to a six-month or annual plan. My son mainly enjoys playing the web version of Prodigy on his Chromebook, but it is also available as an iOS and Android app. When I asked him if he recommends it to other kids, he said he definitely does it because he teaches kids how to do math and it's amazing.
